

Richter Sampling Valves

Body ductile iron with
PFA lining or investment
cast stainless steel

Bellows-sealed

Safety packing gland

Representative sampling

Richter sampling valves

Fields of application

Representative and safe sampling of pure and slightly solids-laden media in the chemical, pharmaceutical and other industries.

The Richter series PA/F (fluoroplastic lining PFA) and PA/S (stainless steel version) are specially suitable for taking samples

- of corrosive and pure media, also slightly solids-laden media
- during the actual process
- prior to filling into other containers/further transport
- prior to feeding into the process
- for the regular monitoring of stocks
- in the piping and from containers

Operating ranges

- from -60 to 200 °C (-75 to 400 °F)
- from vacuum to max. 16 bar (235 psi)

Product features

- Top-entry design for very easy maintenance, the valve body can remain installed in the system
- Valve actuation: safety hand lever, removable. Pneumatic or electric actuator on request.
- Long plug tip: Counteracts clogging, e.g. caking media.
- Anti-adhesive, wetted surfaces thanks to PFA/PTFE (PA/F), can be steam-sterilised (must be checked on a case-to-case basis)
- External corrosion protection: Epoxy coating (PA/F), stainless steel valve bonnet and screws
- Marking: to DIN EN 19
- On request with stainless steel protective cabinet (see page 5)

Type codes, materials

Sampling valve

- | | |
|-------------------------------|---------|
| • manual actuation | PA/... |
| • remote actuation | PAP/... |
| • perfluoroalkoxy (PFA) lined | .../F |
| • stainless steel version | .../S |

① Travel stop, adjustable from outside

- finely metered sampling
- closing force can be increased at any time if the sealing action in the seat/plug area is insufficient (e.g. if sealing surfaces damaged)

② Safety spring return

by means of a central spring suitable for all pressure ranges ("dead man's handle")

③ Safety packing gland

- acts independently
- re-adjustable from outside

④ a: Lining virgin PFA

- wall thickness 3-3.5 mm
- high permeation resistance
- vacuum-proof anchored

b: Alternatively stainless steel 1.4435 (316 L) investment cast body without lining

⑤ Glandless due to heavy-duty PTFE bellows

- hermetic sealing of the product chamber
- bellows wall 2.5 mm thick, can also be used for highly permeating media

⑥ Cavity-free

- tapered valve bottom
- representative sampling: only fresh medium is taken
- no prior rinsing necessary
- no formation of residue in the entire valve

⑦ Standard bottle connection with thread GL to DIN 168

- modified pure PTFE
- secured against turning
- possibility of side connection for venting or overflow
- for PA/F: integrated FKM O-ring (Viton® or equivalent) is not wetted
- further connection possibilities (page 6)

⑧ Removable safety hand lever

- disengages after actuation
- on request firmly installed with split pin in central bore
- lockable with lock or split pin
- alternative position: lever upwards

⑨ Highly viscous media or applications with low operating pressure:

Special plug and seat option (see page 6).

⑩ For solids-laden media:

Inclined or vertical position of the valve and, as a result, possibly special bottle connection are recommended (see page 6).

Differentiation to sampling ball valves

Conventional sampling ball valves

- are not cavity-free: Residues remain in the area between the ball and the body lining and therefore, before a representative sample can be taken, rinsing must be performed several times and troublesome disposal of the initial samples is necessary
- promote an undesirable increase in the sedimentation of solids in the dead leg above the ball
- are usually not self-closing, no "dead man's handle"
- have a normal packing gland seal, are not self-adjusting, have no bellows sealing

**Sampling valve PA/F
with thick-walled PFA lining**

**Sampling valve PA/S
of stainless steel design (without lining)**

Richter sampling valves

Components and materials

Item	Designation	Material
100	Body	PA/F: ductile cast iron EN-JS 1049/ ASTM A395 with PFA lining
		PA/S: investm. cast stainl. steel 1.4435 (316 L)
104	Transition flange	stainless steel (only DN 40+80, not shown)
106	Cover	stainless steel
203	Lever	stainless steel
205	Seat	PA/F: ductile cast iron EN-JS 1049/ ASTM A395 with PFA lining DN 40+80: stainless steel
		PA/S: investm. cast stainl. steel 1.4435 (316 L)
206	Bellows w. plug	modified pure PTFE
226	Bottle connection	modified pure PTFE
302/1	Guide ring	PTFE carbon
400/1	O-ring, not wetted	FKM (Viton® or equivalent)
402/1	Packing ring	PTFE
405/1	Thrust ring	stainless steel
503	Packing gland follower	stainless steel
509/1	Groove nut	stainless steel
513	Spring bonnet	stainless steel
514	Spring bush	stainless steel
515	Actuation	stainless steel
550/1	Disc	stainless steel
561/1	Grooved pin	stainless steel
855	Stem	stainless steel
902/1	Stud screw	stainless steel
904/1	Setscrew	stainless steel
920/3	Hex. check nut	stainless steel
952	Pressure spring	stainless steel
963	Star knob	plastic/stainless steel
964	Ball head	plastic

Temperature/pressure ranges

Temperature °C (°F)	20 (70)	150 (300)	200 (400)
Pressure bar (psi)	16 (235)	15 (220)	14 (205)

* manually actuated

Other valve sizes on request

Viscosity/operating pressure diagram

Options

Sampling valves
with stainless steel
protective cabinet

The protective cabinets
are produced in standard sizes
and with various accessories,
also custom-made.
Fig.: Option with spring-loaded
bottle holder.

Sampling valves
with actuator

Pneumatic and electric
actuators. Makes as per
customer's choice.

Septum bottle
adapter for
high-purity media

For design details,
see page 6

NEW:
Needle and adapter
made of stainless steel

With this new option
sampling in a septum bottle
is even possible with the
stainless steel series PA/S.

Body heating

e.g. for crystallising media,
heating jacket made of stainless steel,
mounted (PA/F) or welded on (PA/S)

Handwheel instead
of lever actuation

Permits particularly finely metered
sampling over the entire flow range of the valve.
No automatic spring return.

Flat plug for
slightly solids-laden media

The integrated FFKM O-ring still
seals if small solid particles are jammed
in the sealing surface area.

Plug and adapter versions

Special design for highly viscous media or applications with low operating pressure

The standard version of the PA valve with a tapered plug has a travel of 3 mm, producing an angular gap of 0.5 mm over a length of 20 mm.

However, taking samples of

- higher viscous media and
- media with a low operating pressure

requires an enlarged passage cross section.

With a travel of 3 mm the special flat plug produces a full cross section of the outlet opening of 10 mm.

The suitable valve plug is selected according to the viscosity/operating pressure diagram (see page 4).

Richter should be consulted in case of different application parameters.

Flat plug

Choice of connection possibilities for sampling bottles

Adapter for standard horizontal valve installation

Adapter for vertical valve installation

Twin adapter for two different bottle sizes

Adapter for hose nozzle

Adapter with O-ring, prevents the ingress of ambient atmosphere

Adapter for septum bottle (see picture page 5)

A spring-loaded threadless bottle clamping feature can also be provided in conjunction with a protective cabinet; see page 5.
Bottle connections: Standard GL to DIN 168 and customised special versions.
